

For Immediate Release

XLN & Force10 form strategic partnership

XLN SYSTEMS (XLN) announces our strategic partnership with Force10 Networks of San Jose, California, a pioneer in building and securing reliable, high performance networks featuring advances in high density Gigabit and 10 Gigabit Ethernet switching.

"We are proud and excited to offer the Ohio IT community an alternative for their high density network requirements" said Allen Perk, President of XLN. "Force10 offers state of the art technology in a reliable and proven family of high density switches".

It was noted by the XLN technical engineering staff that Force10 switches are a vital part of eHarmony, Veritas, Novartis, and Stan Wilson Studios.

"As the network becomes more valuable, it is increasingly clear that there is no one solution that fits for all customers, but what all customers need is reliability throughout their network," said Sachi Sambandan, vice president of engineering at Force10 Networks.

To introduce Force10 to Columbus, XLN has teamed up with Platform Labs as an independent site to test and highlight Force10 versus other switch technologies. "We are confident in our products and are very willing to put them head to head with anyone" added Mr. Perk.

About XLN SYSTEMS

XLN SYSTEMS (XLN), an Information Technology and Network Security Solutions Integrator, is primarily focused on customer satisfaction in IT Security solutions, Professional Software Services, and legacy systems. As a Service Disabled Veteran Owned company, located in Columbus, Ohio, we have been providing solutions to our clients since 1991. We boast a high client satisfaction rate of over 97%.

Our Network solutions consist of high density Gigabit and 10 Gigabit Ethernet Switches.

Our Network Security solutions focus on protecting web applications from identity theft and data loss, defending the network interior from rapidly propagating threats. We also offer state-of-art Forensic Computing Services and Information Assurance services & programs.

Our Professional Software Services range from application development to network engineering and from business analysts to project managers. In addition, we support the most secure legacy operating system on the market – OpenVMS by HP.
